Software output for Feedback question:

Response to Examiner Feedback — 3

Address the controlled-study analysis and interpretation concerns.

Software Output:

Analysis Output (Structure)

```
ARG CONTROLLED EVALUATION — ANALYSIS OUTPUT
Appendix G | H1–H5 | n = 34 SOC Analysts

H1 — Trust Calibration Accuracy  (Paired t-test, n = 34)
  Explained:   M = 0.331, SD = 0.063
  Unaided:     M = 0.333, SD = 0.068
  Diff (E–U):  M = −0.003, SD = 0.102
  t(33) = 0.096;  p = 0.924;  d_z = 0.016
  Shapiro-Wilk W = 0.971, p = 0.481

H2 — Decision Time  (Paired t-test, n = 34)
  Explained:   M = 5,219 ms, SD = 4,078 ms
  Unaided:     M = 4,080 ms, SD = 1,842 ms
  Diff (E–U):  M = +1,139 ms, SD = 3,690 ms
  t(33) = 1.800;  p = 0.081;  d_z = 0.309
  Shapiro-Wilk W = 0.953, p = 0.152

H3 — Decision Quality  (McNemar's exact, 204 pairs)
  b = 2 (unaided correct, explained wrong)
  c = 4 (unaided wrong, explained correct)
  p = 0.688;  OR = 2.00 [0.37, 10.92];  φ = 0.044

H5 — Willingness to Act  (McNemar's exact, 204 pairs)
  b = 4,  c = 4
  p = 1.000;  OR = 1.00 [0.37, 2.70];  φ = 0.000

H4 — Seniority Moderation  (Indep. t-test, 17 junior vs. 17 senior)
  Junior:  M = +0.010, SD = 0.072
  Senior:  M = −0.029, SD = 0.066
  Levene F(1,32) = 0.84, p = 0.366
  t(32) = 0.126;  p = 0.900;  d = 0.043 [−0.66, 0.74]

Holm-Bonferroni: H2=0.324, H3=1.000, H5=1.000, H1=1.000
All five hypotheses retained at α = 0.05.
```

De-identified 408-row trial-level dataset

1. Participant_ID,
2. Seniority_Band,
3. Condition_Order,
4. Scenario_ID,
5. Condition,
6. Trust_Rating,
7. Decision_Correct,
8. Followed_AI,
9. Decision_Time_ms

Variable definitions

All variables are defined in §G.5 (Measures) and Appendix H (Table H.2):

Variable	Definition
Trust calibration score	Mean |trust_normalised − correct| across 6 scenarios per condition
Trust normalised	(trust rating − 1) ÷ 4, mapped to 0–1 scale
